Habit Shaper

My role. Full Stack Developer

Project description.

A lightweight web app for building good habits and breaking bad ones, with daily check-ins, streaks, clean streaks, weekly completion rates and goals. Built with Fastify and React.

Key Contributions:

- Built a Fastify + TypeScript REST API and a React 19 SPA served on one origin by nginx.
- Derived streaks and weekly rates from a per-day log, in each user's own time zone.
- Implemented email-first sign-in and hand-written RFC 6238 TOTP MFA with trusted devices.
- Hardened with argon2id, AES-256-GCM secrets and Redis-backed rate limits.
- Shipped as one Docker Compose stack, covered by 130+ automated tests.

SiniAja!

My role. Full Stack Developer

Project description.

A link-in-bio platform for creators, small businesses, and freelancers. Every user gets a public page plus a no-code dashboard to manage links, media, a mini-shop, and polls. Built with Laravel and React.

Key Contributions:

- Built an API-only Laravel backend serving 83 REST endpoints across 27 database tables.
- Designed a config-driven block registry that renders every content block from polymorphic models.
- Implemented Sanctum auth, Google Sign-In, and RFC 6238 TOTP multi-factor login with trusted devices.
- Cached public profile payloads with global write invalidation, and shipped a bilingual EN/ID interface.
- Covered the codebase with 337 automated Pest tests.

Mavie Cinema

My role. Full Stack Developer

Project description.

Developed a cinema website equipped with subscription and payment gateway features, running on FrankenPHP. A web application built with the Laravel Framework.

Key Contributions:

- Upgraded system from Laravel 9 to Laravel 12 for modernization.
- Fully containerized application using Docker for scalable deployment portability.
- Improved system performance with Laravel Octane and FrankenPHP integration
- Developed subscription feature to enable recurring billing and user plan management.
- Developed integrated payment gateway supporting secure and reliable transactions.

Transaction w Auth

My role. Full Stack Developer

Project description.

Developed a Transaction w Auth website with the backend built using .NET Core (C#) and the frontend using React + Vite + TailwindCSS. The system is designed to manage products, orders, and user authentication.

Key Contributions:

- Developed ASP.NET Core backend API with modular architecture (Controllers, Models, DTOs, DAOs, Interfaces) to ensure maintainability and scalability.
- Integrated authentication & authorization middleware to secure API endpoints.
- Implemented Entity Framework Core with Migrations for database schema management and persistence.
- Built React + Vite frontend integrated with Tailwind CSS, delivering a responsive and modern UI/UX.
- Configured CI/CD deployment pipelines (Vercel for frontend, .NET build pipeline for backend).

Bebras Help Desk Application

My role. Full Stack Developer

Project description.

Developed a website-based forum that assists educators in discussing various topics, sharing knowledge, and engaging in mutual question-and-answer sessions.

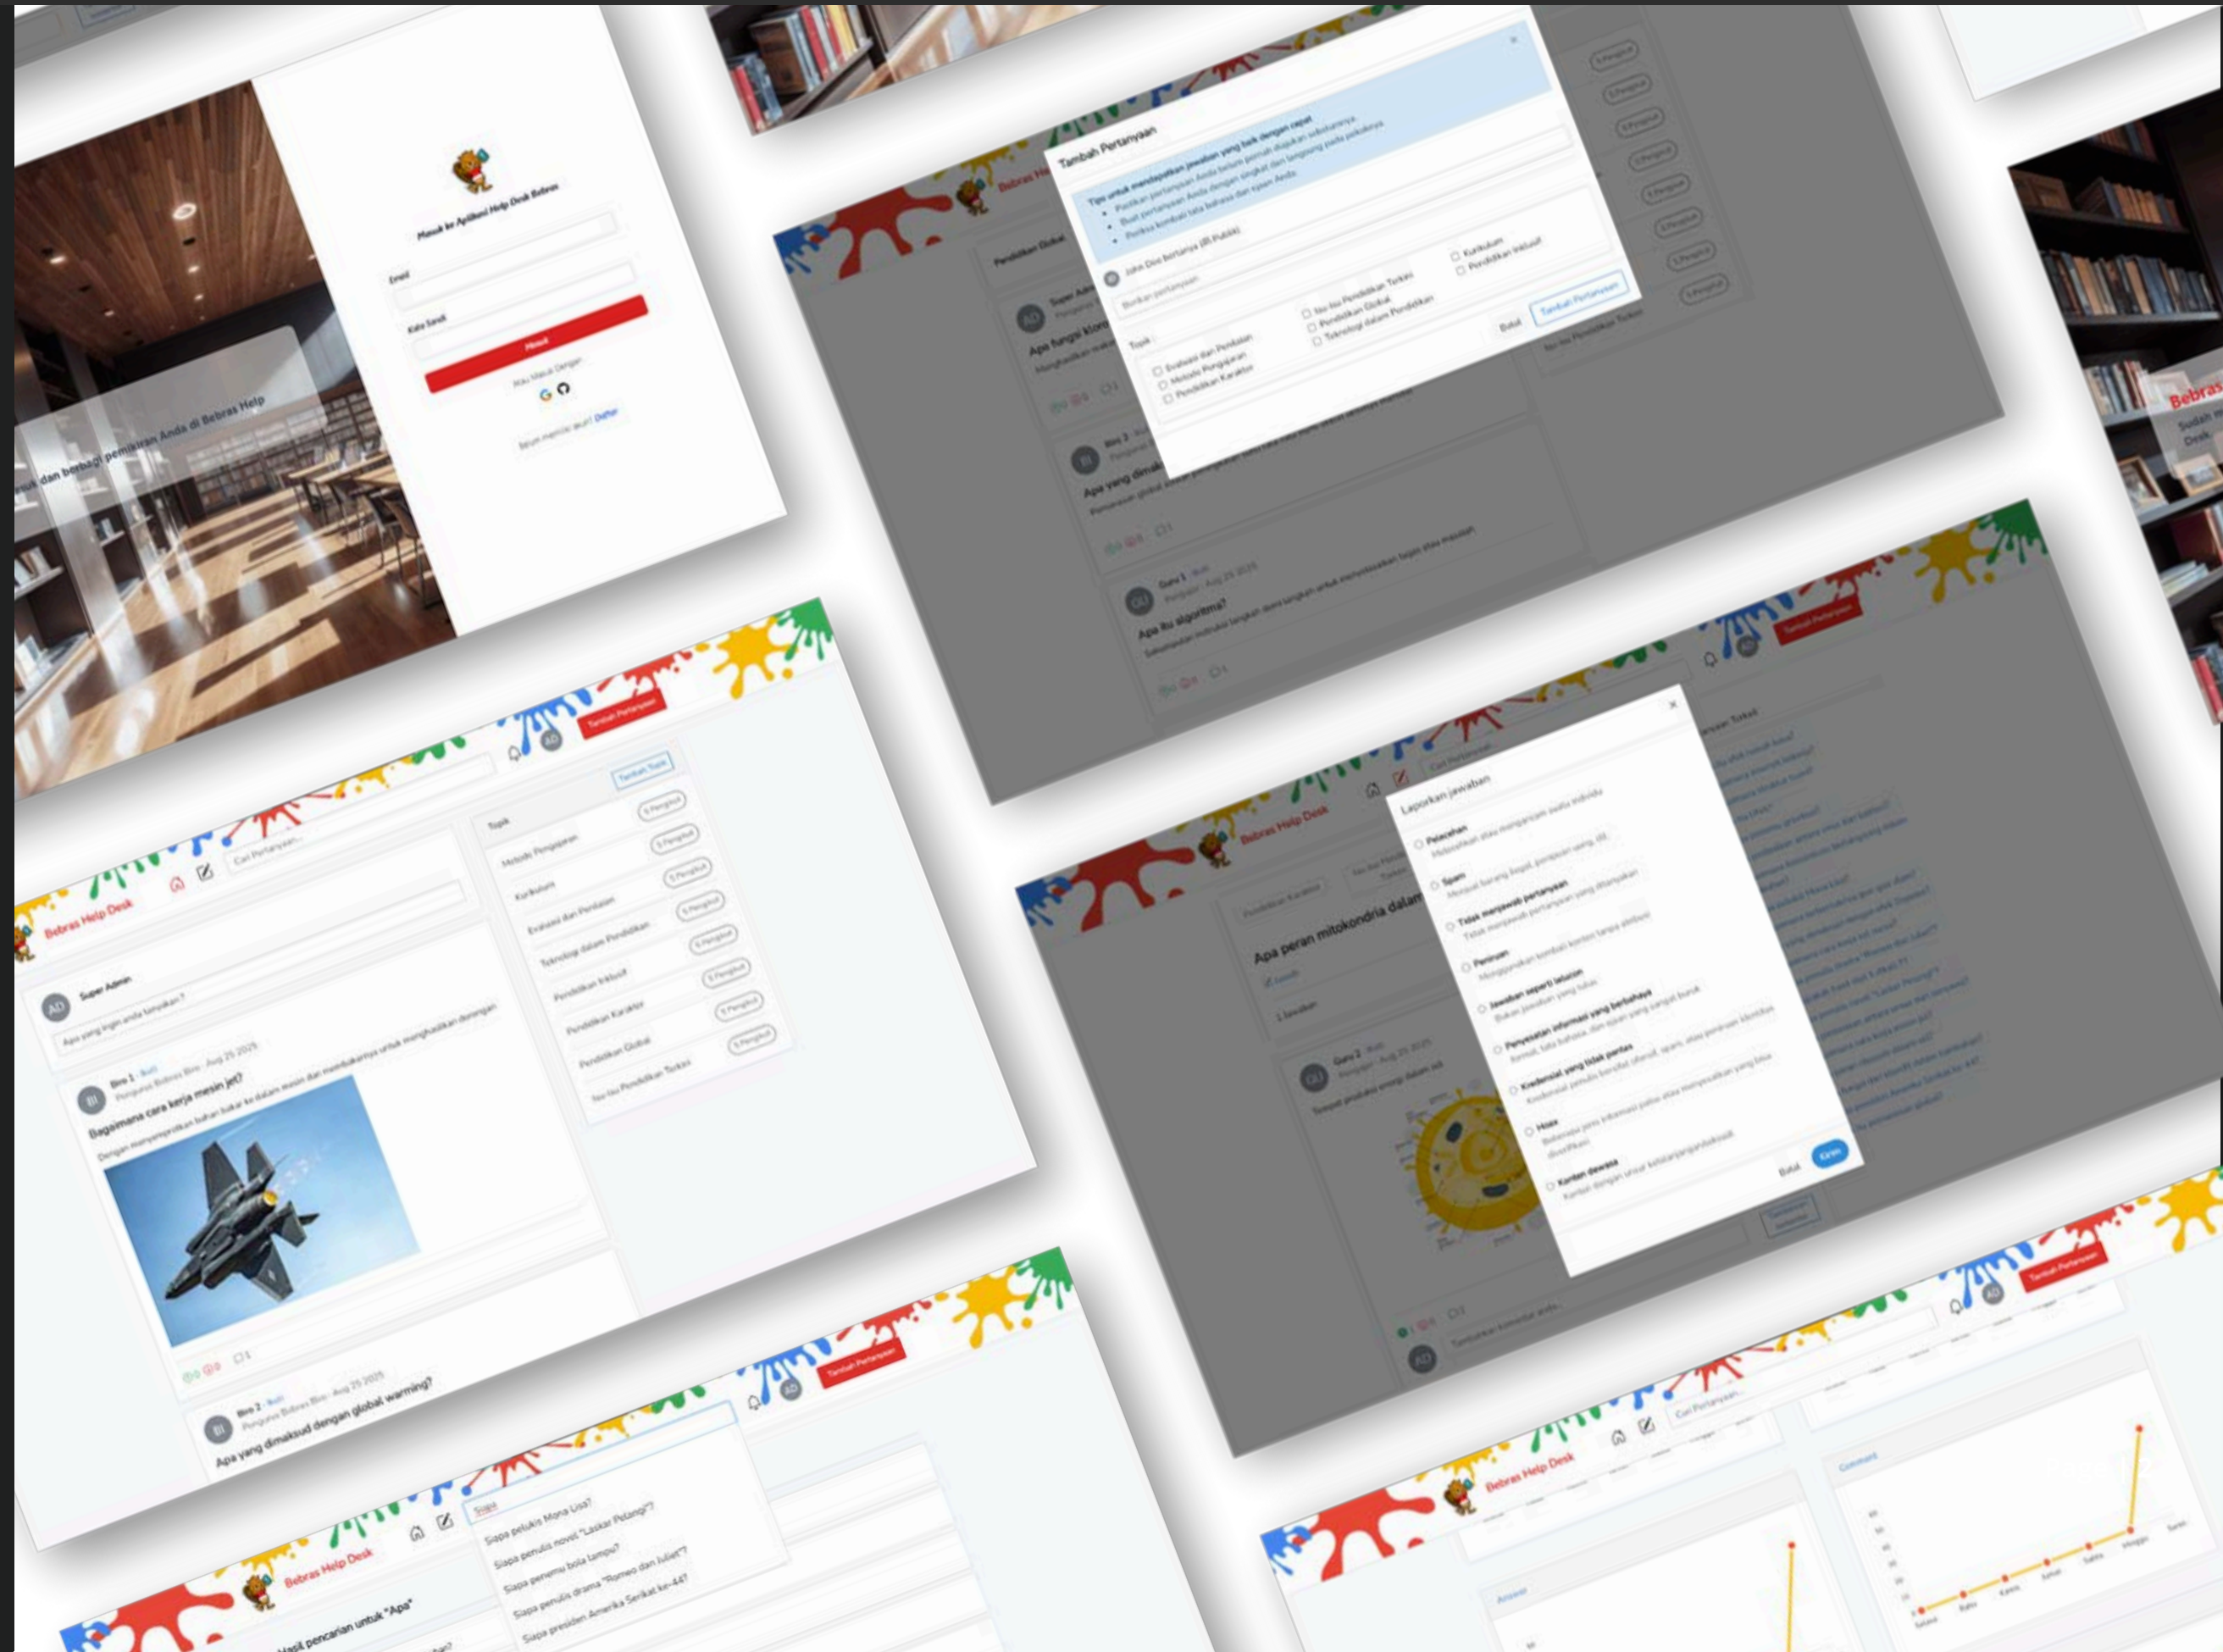

Key Contributions:

- Implemented CRUD functionality for questions, answers, and comments to support dynamic user interactions.
- Developed follow/unfollow users and topic associations for personalized engagement.
- Developed upvote/downvote system, reporting mechanism, and question search.
- Built notification and profile management modules with real-time website alerts and email delivery to enhance user experience and personalization.
- Developed admin panel for managing user-generated content across questions, answers, and topics.

My Personal Website

My role. Frontend Developer

Project description.

Developing a custom website showcasing of my skills and projects, built with modern web technologies. The best way to experience it is to visit the live version.

Key Contributions:

- Designed and developed a personal portfolio website showcasing skills, experiences, and projects using HTML5, CSS3, and JavaScript.
- Created a responsive layout ensuring compatibility across devices and screen sizes.

Laundry Del

My role. Full Stack Developer

Project description.

Developed a website that can help students and laundry staff find out information about all orders and student clothes.

Key Contributions:

- Developed laundry listing feature allowing students to submit and manage their clothing items.
- Built admin panel enabling laundry staff to access all student laundry records.
- Developed a unified login page with toggle-based role switching (student and laundry staff) without page redirection.
- Implemented the entire front-end interface using Tailwind CSS for responsive and modern UI.

Cafeteria

My role. Full Stack Developer

Project description.

Developed a website that can assist cafeteria operators in determining the ratings of the food menus they offer.

Key Contributions:

- Implemented create and delete functionality for food items to allow flexible content management.
- Developed food voting system with create and edit capabilities to enable user-driven ranking.
- Integrated all interaction processes into Livewire components to provide a seamless experience without requiring page refreshes.

Mandiri News App

My role. Mobile App Developer

Project description.

Developed a flutter application fetches news articles from an API and displays them in a user-friendly interface.

Key Contributions:

- Developed main page with dynamic function to display all news content retrieved from the API.
- Implemented detailed news page with conditional logic to display selected news items based on specific criteria.
- Converted raw JSON responses from API into strongly-typed data models, ensuring reliable rendering of news content on the front-end.
- Built clean and responsive UI for news listing and detail views.
