SiniAja!

My role. Full Stack Developer

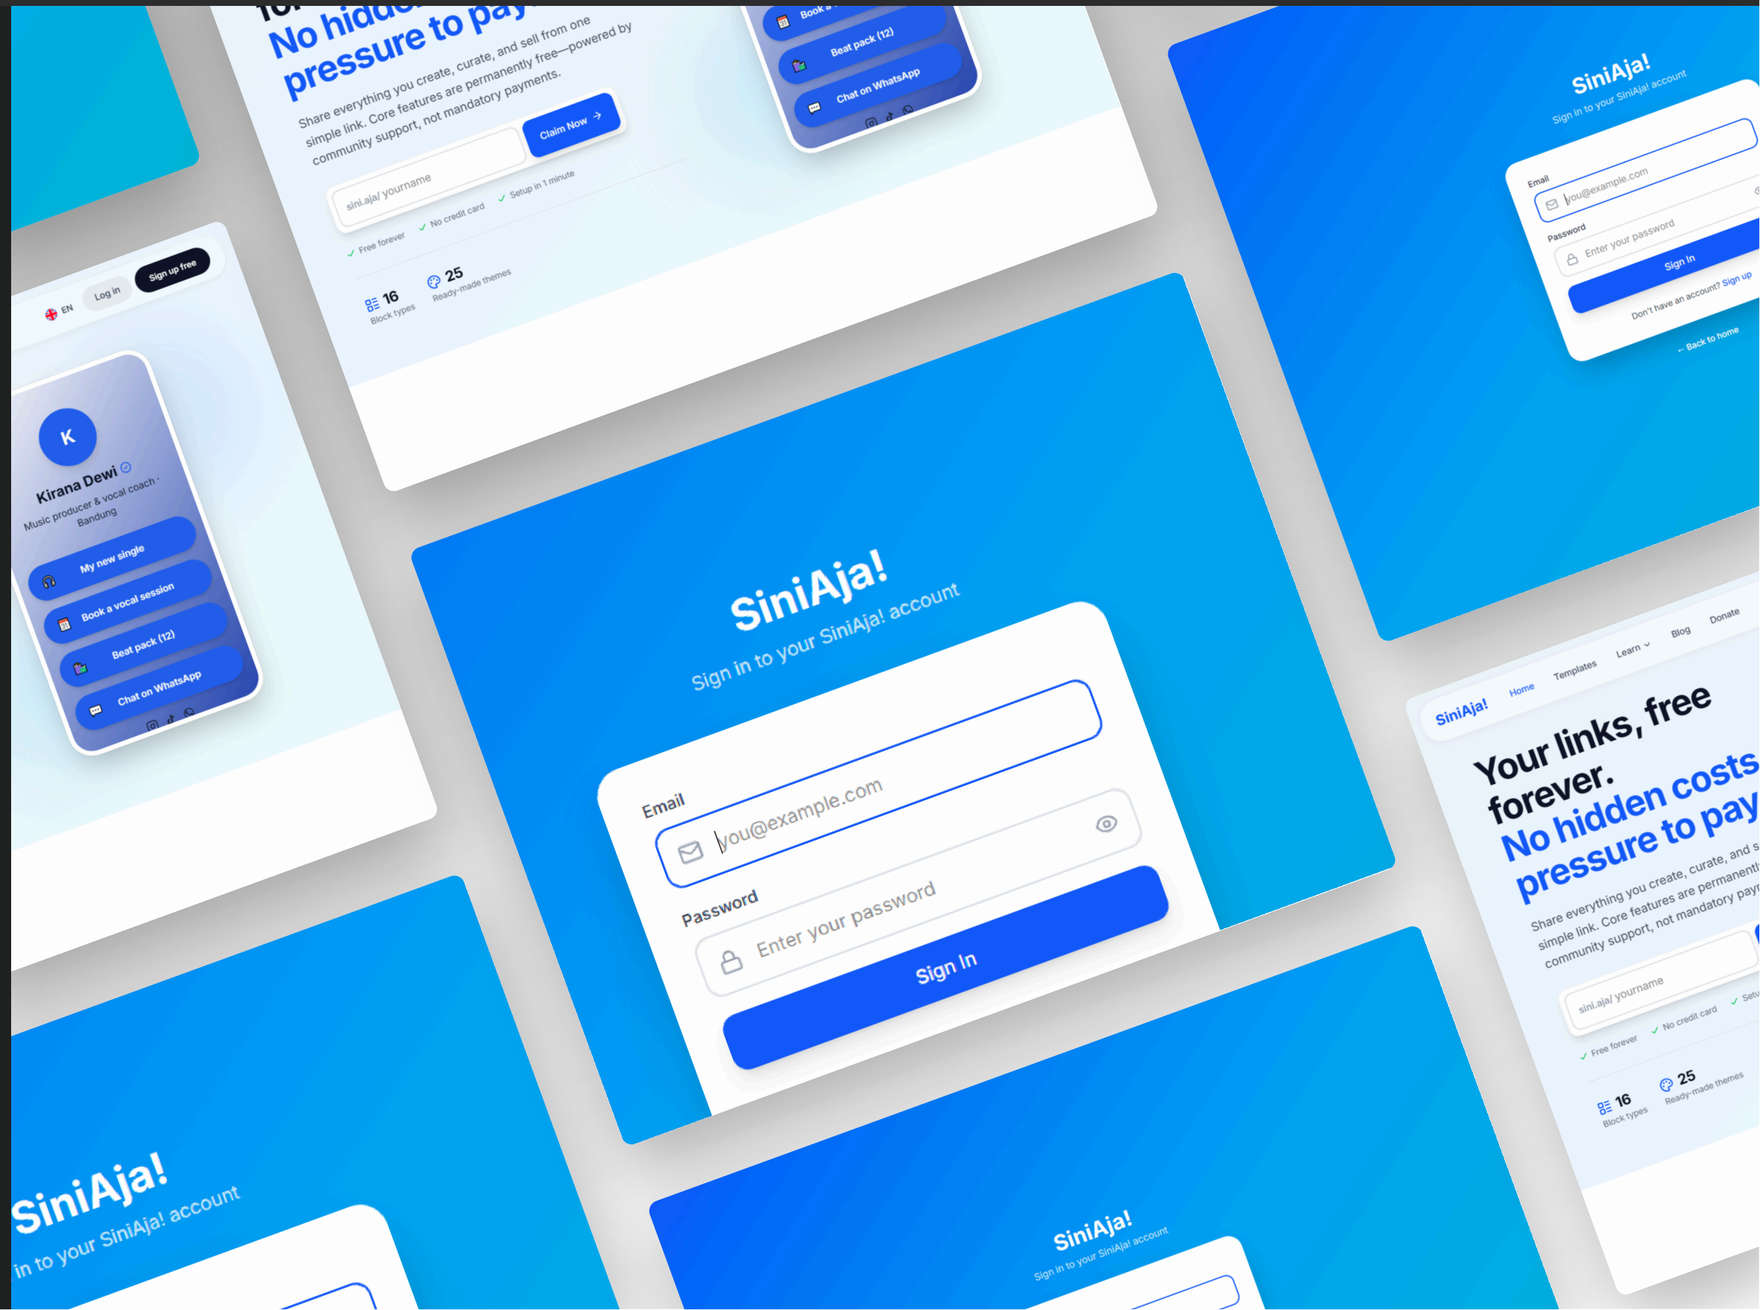

Project description.
A link-in-bio platform for creators, small businesses, and freelancers. Every user gets a public page plus a no-code dashboard to manage links, media, a mini-shop, and polls. Built with Go and React.

Key Contributions:
- Built an API-only Go (Gin + GORM) backend serving 79 REST endpoints across 10 database tables.
- Designed a config-driven registry of 25 block types; a new type needs no migration or model.
- Implemented token auth, Google Sign-In, and hand-written RFC 6238 TOTP MFA with trusted devices.
- Cached public pages with invalidation on every write, and shipped a bilingual EN/ID interface.
- Covered it with 1,390+ automated Go and React tests.

Live site:
https://siniaja.samz.my.id

Skills and deliverables

Go | Gin | GORM | React | TypeScript | Vite | Tailwind CSS | MySQL | REST API | TOTP MFA | i18n | Testing

Snapshore

My role. Software Engineer

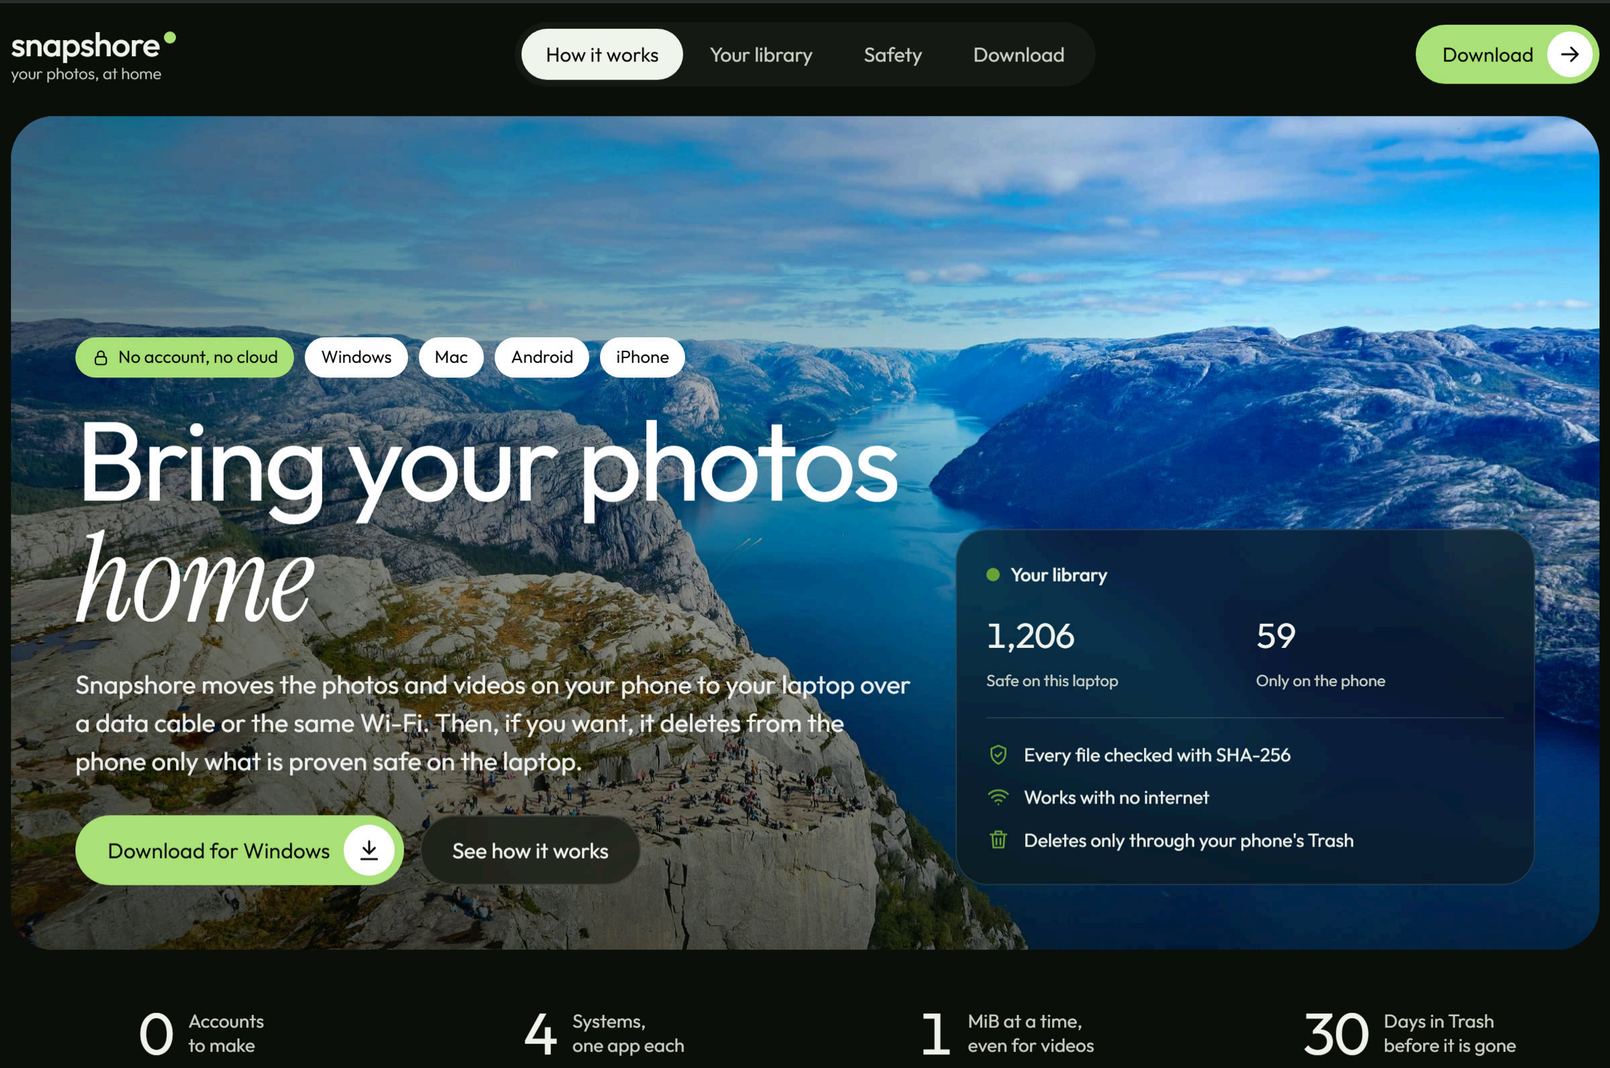

Project description.
Moves photos from a phone to a laptop over a data cable or the same Wi-Fi, with no account or cloud, then deletes from the phone only what is proven safe. One app each for Windows, macOS, Android, iOS.

Key Contributions:
- Designed an HTTPS protocol where the phone serves and the laptop fetches, found by mDNS or USB.
- Built pairing on a typed code proven by PBKDF2 + HMAC over pinned TLS.
- Streamed files in 1 MiB chunks with resume, SHA-256 verified before any delete.
- Moved 12,000 photos off an emulated 4 GB-RAM phone at an 81.5 MB memory peak.
- Built an offline library on the laptop (timeline, map, albums), covered with the rest by 680+ tests.

Live site:
https://snapshore.samz.my.id

Skills and deliverables

Go | Wails | React | TypeScript | Kotlin | Compose | Swift | SwiftUI | TLS | mDNS | Testing

Habit Shaper

My role. Full Stack Developer

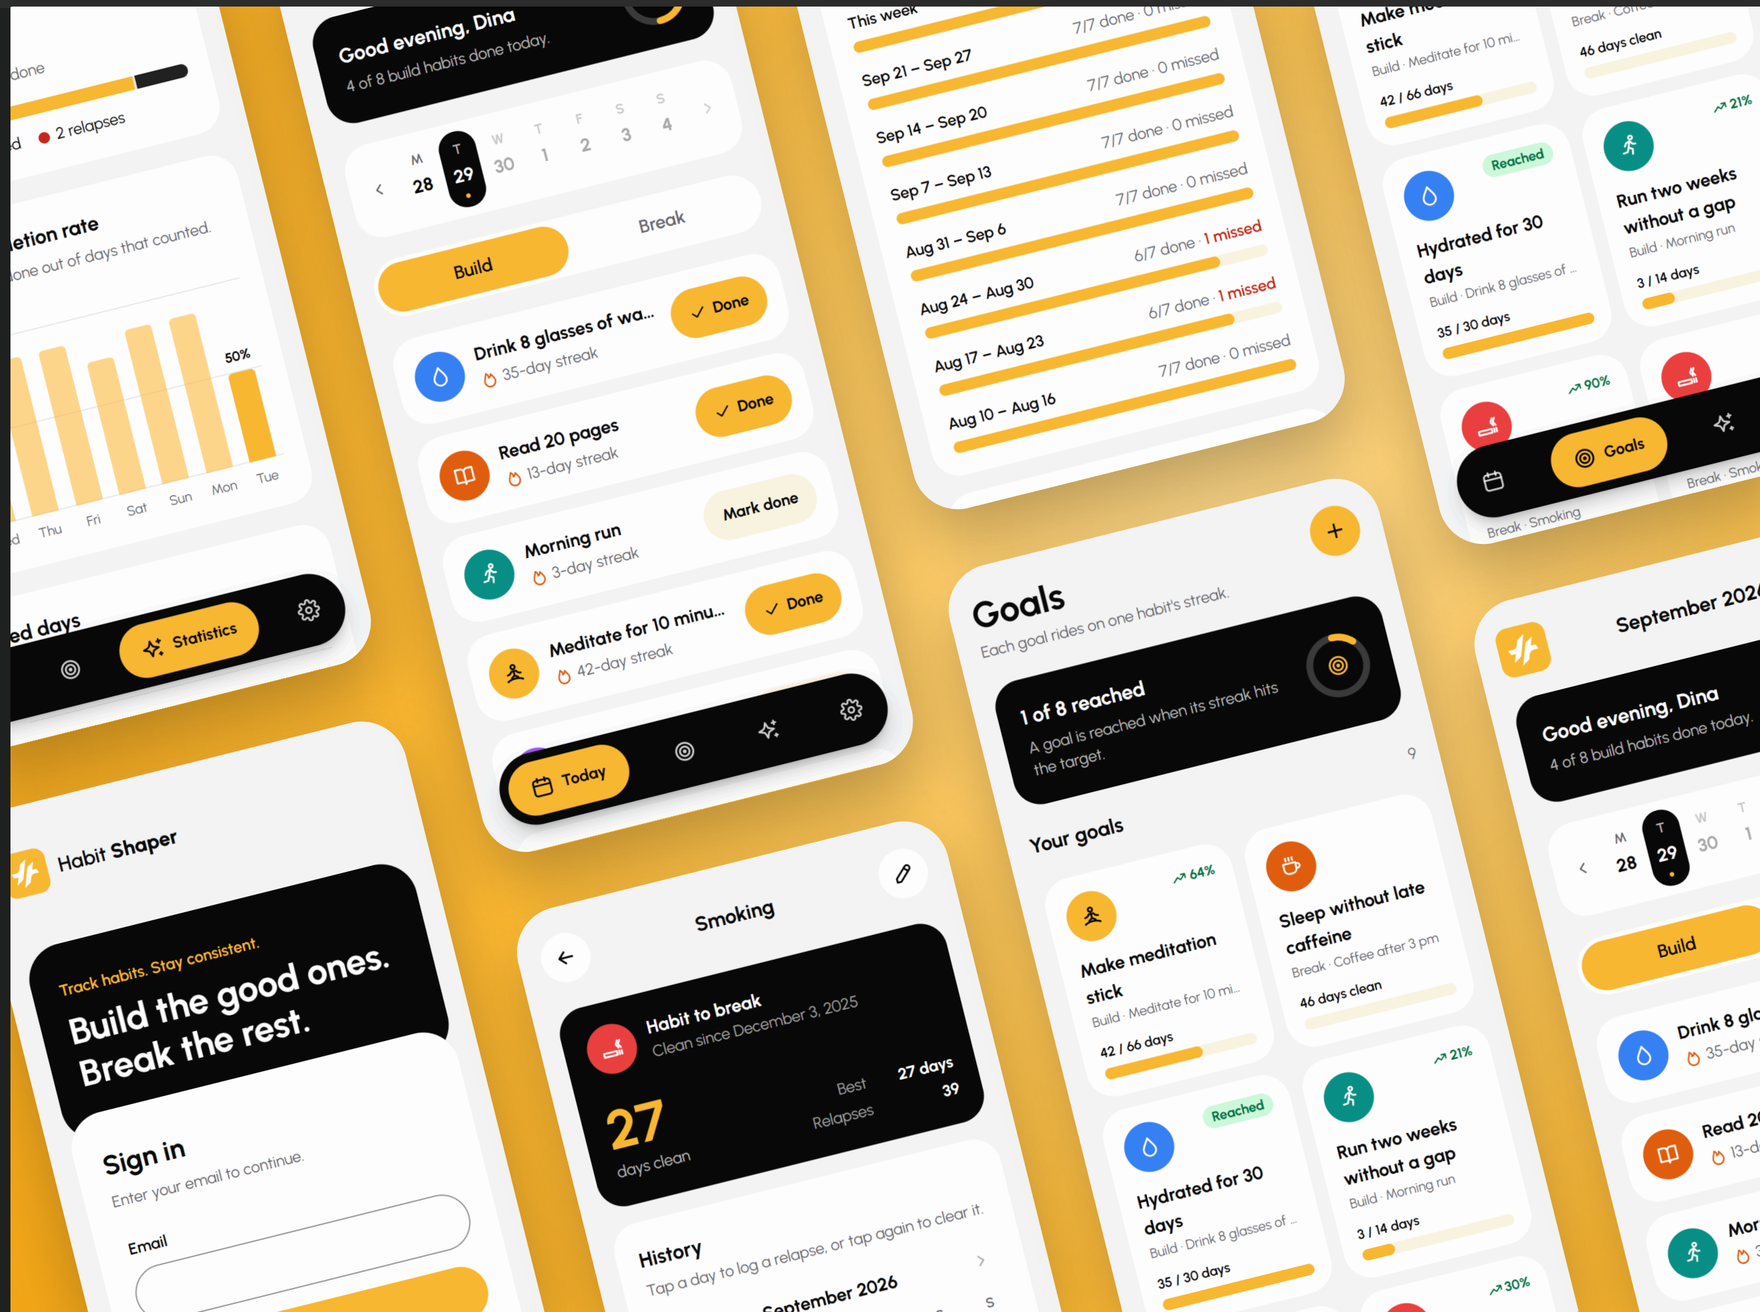

Project description.
A lightweight web app for building good habits and breaking bad ones, with daily check-ins, streaks, clean streaks, weekly completion rates and goals. Built with Fastify and React.

Key Contributions:
- Built a Fastify + TypeScript REST API and a React 19 SPA served on one origin by nginx.
- Derived streaks and weekly rates from a per-day log, in each user's own time zone.
- Implemented email-first sign-in and hand-written RFC 6238 TOTP MFA with trusted devices.
- Hardened with argon2id, AES-256-GCM secrets and Redis-backed rate limits.
- Shipped as one Docker Compose stack, covered by 150+ automated tests.

Live site:
https://habit.samz.my.id

Skills and deliverables

React TypeScript Node.js Fastify
Vite Tailwind CSS MySQL Redis
Docker REST API TOTP MFA Testing
